Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

This office action is in response to the preliminary amendment of January 27, 2004.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2 is vague and indefinite because it sets forth that the inlet valve is mounted to the valve seat. However, as is clear from the description and the drawings both of the valves are pinned to the valve plate and not the valve seat.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4, 5, 8 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Kurihara et al (USPN 6,318,980).

Kurihara et al discloses a refrigerant compressor having a piston (46) reciprocating in a cylinder. There is a valve plate (11) having a discharge passage (14) which widens adjacent to the pinned (47) valve (12). Note especially Figs. 7-9, 11-13, 15-17, 19-21, 23-25 and 27-29.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3, 7 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted prior art (AAPA) in view of Kurihara et al.

Applicant's admitted prior art (Fig. 1) discloses a compressor having a cylinder head (22), a piston (26), a chamber (28), an inlet valve (30) which is radially outwards of a discharge valve (36), a discharge port (32) with a first cross sectional area, and a valve seat (38). The AAPA does not disclose the area defined inwardly of the valve seat being greater than the first cross sectional area. As set forth in the above rejection under 35 USC 102(b) Kurihara et al disclose a valve having a valve seat with an area defined inwardly of the valve seat being greater than the cross sectional area of the discharge port. At the time of the invention it would have been obvious to substitute a discharge valve as set forth by Kurihara et al for the similar discharge valve of applicant's admitted prior art in order to suppress turbulence of the refrigerant gas flow.

Allowable Subject Matter

Claim 6 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Peracchio et al (USPN 5,370,156) discloses a compressor with a discharge valve having an area adjacent a valve seat (21) which is greater than a cross sectional area of a discharge port (16).
